

iThemba LABS Radioactive Beam Project Workshop 2011

Thursday 15 September 2011 - Friday 16 September 2011

iThemba LABS

Scientific Programme

The purpose of this workshop is to develop the physics case for the proposal. All interested parties are invited to attend.

The workshop shall be held over two days and comprise talks by international and local experts, and parallel sessions of discussion groups to define the experimental programme. These groups will be expected to eventually submit written proposals that will form the content of the physics case. These proposals will also define the desired species of radioactive beams for a technical feasibility study.
