## Asymptotic Grand Unification

*Monday, 21 March 2022 15:55 (15 minutes)*

We explicitly test the asymptotic grand unification of a minimal 5-dimensional model with  $SO(10)$  gauge theory compactified on an  $S^1/Z_2 \times Z_2'$  orbifold. We consider that all the matter fields propagate in the bulk and show that the gauge couplings asymptotically run to a unified fixed point in the UV. However, the Yukawa couplings will typically hit a Landau pole before the GUT scale in this class of  $SO(10)$  models.
