## Flavor changing neutral current in the flipped 341 model

*Monday, 21 March 2022 16:55 (15 minutes)*

We present a new chiral gauge anomaly flipped 341 model where lepton families are arranged in different  $SU(4)$  gauge group representations leading to a nonuniversal coupling with heavy neutral gauge bosons  $Z'$  and  $Z''$  of the model. The resulted flavor-changing neutral current in the leptonic sector is discussed and bounds on some of the flavor changing parameters are derived using the recent experimental data on the muon rare decays.
