RECOMMENDATION FOR PROF. MICHAEL ADELEYE

I am writing to strongly recommend that Prof. Michael Adeleye be supported to attend the Sixth International Workshop on Advanced Nuclear Science and Technology Techniques (ANSTT). The workshop will be held at iThemba LABS in Cape Town, South Africa, from 18–22 May 2026.

As documented in the invitation, this workshop is the latest in a highly successful series and serves as a key platform for discussing cutting-edge developments in nuclear science. The thematic areas of the workshop, particularly Environmental Measurements, Physics and Applications align directly with his expertise. Prof. Adeleye has been personally invited by the organizers, Dr. Pete Jones (iThemba LABS) and Prof. Alison Bruce (University of Brighton), to attend the meeting and present his work. They have specifically requested his participation as a leading expert in the field and as an interested party in collaborating on experimental programmes at iThemba LABS.

Attendance at this workshop will offer significant professional and institutional benefits. It provides a prestigious platform for Prof. Adeleye to disseminate his recent research to an international audience, thereby enhancing our institution's visibility in the field. Furthermore, the workshop places a strong emphasis on forming new collaborations and networking, including the potential for establishing Memoranda of Understanding, which aligns directly with our institutional goals for fostering international research partnerships. Finally, participation will enable him to stay abreast of the latest advancements in nuclear structure studies, radiation physics, and future experimental programmes, contributing to his ongoing professional development.

Given the prestige of the invitation, the direct relevance to his field, and the potential for fostering valuable international collaborations, I fully support Prof. Adeleye's participation in this event.

Sincerely Yours,

Okoli, Bamidele. J. Ph.D
