High-Energy Nuclear Collisions (Hard Probes 2013)

Contribution ID: 35

Type: **Oral**

## Ridge correlations from initial state.

*Thursday, 7 November 2013 13:30 (20 minutes)*

I describe several mechanisms that lead to ridge like correlations in the produced particle spectrum in p-p and p-A collisions at high energy. The discussion is within the Color Glass Condensate framework, but the physics involved is not directly tied with saturation.
