

CMS - Past, Present, and Future

Friday, 5 December 2014 12:45 (45 minutes)

I'll present the current status of CMS, with some highlights from the very successful first run of the CERN LHC, which culminated in the discovery of the Higgs boson. I'll talk about detector upgrade and commissioning work being done in preparation for Run 2 and also cover plans for long-term upgrade of the CMS detector for future high-luminosity runs.

Primary author: Prof. LANDSBERG, Greg (Brown University)
