## Lepton flavor universality in Bc decays to charmonia

We discuss semileptonic Bc-meson decays into final charmonium states  $J/\psi$  and  $\eta_c$  within the Standard Model and beyond. We calculate relevant hadronic transition form factors and motivated by the recent measured deviations in  $B_c \rightarrow J/\psi l \nu$  decay from the SM prediction, we carefully examine possibilities of New Physics in these decays.
